

i.Beat veo

Multimedia player with 3" TFT display and audio/video output

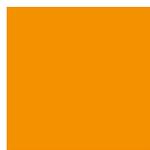

Small but powerful – that is the i.Beat veo. The compact multimedia player combines video and listening pleasure in a unique manner. It plays back all popular audio, photo and video formats. Even HD movies up to 720p can be played by the i.Beat veo. Thereby, the bright high-resolution 3" full color TFT display with 400 x 240 pixels offers particularly brilliant pictures. With a battery life of up to 8 hours, long journeys or waiting times can be bridged with entertaining films or music.

But that's not all: Through a combined audio/video output, you can connect the i.Beat veo fast and easily with the TV and play images and video in large format. Thus you have your own personal slide show and your own movie collection on the i.Beat veo always at hand.

Intuitive and clear – thanks to the handy folder navigation, long searching for the desired title or desired movie belongs to the past. Title, artist, year and album are always in view per ID3 tag via the media library. With seven equalizer settings and five repeat functions, you can adjust your listening experience as you want it.

The multimedia all-rounder is completed through a practical memo function, with which the i.Beat veo can be converted into a dictaphone and through the integrated FM radio that lets you stay up to date at any time.

Room for your media: The TrekStor i.Beat veo is available with 4 GB or 8 GB integrated storage capacity that can be expanded with microSD memory cards up to 32 GB. This corresponds to approximately 640 music albums.

Technical details
